

ABSTRACT

CROWN PROTECTION DEVICE FOR WRISTWATCH

The device includes a cover (7) for concealing or revealing a crown (5), via a relative rotation of the crown (5) and an external casing element. In a preferred embodiment, the cover (7) is secured to a ring (21, 22) slide friction mounted in an annular groove at the base of the middle part (9) and held in place by a washer (26) provided with lugs (16) in order to be screwed into the horns (17, 17a) of the middle part (9).
